

Standard Procedure for Measuring Digital Camera Battery Consumption

The purpose of this document is to set common standards for measuring and presenting digital camera battery consumption (see Explanatory Notes below at 7), so that digital camera users can use the catalog descriptions and other information provided by digital camera manufacturers to make meaningful comparisons of the battery consumption of different products.

Contents

Introduction

- 1. Scope of application**
 - 2. Test Conditions**
 - 2.1 Principles**
 - 2.2 Batteries used**
 - 2.3 Shooting mode**
 - 2.4 Number of recorded pixels**
 - 2.5 Flash photography**
 - 2.6 Focal distance**
 - 2.7 Subject and brightness**
 - 2.8 Recording medium**
 - 2.9 Motor driven optical zoom operation**
 - 2.10 AE/AF operation**
 - 2.11 Operating environment**
 - 2.12 Use of video and audio**
 - 2.13 White balance**
 - 2.14 White balance**
 - 2.15 End-of-test criteria**
 - 2.16 Color monitor on/off mode**
 - 2.17 Handling when the recording medium is full**
 - 2.18 Handling of playback mode**
 - 2.19 Shooting intervals**
 - 2.20 Power off frequency and intervals**
 - 3. Measurement example (flowchart)**
 - 4. Requirements for Describing Battery Consumption**
- Explanatory Notes**
